

DAILY DRILLING REPORT - Well X09

Report Date: 2024-04-12 | Current Depth: 3790 m MD | Basin: Assam-Arakan

Formation Lithology Table:

Barail Shale: 3700 m to 3820 m

Operations Summary & Incident Log:

At 3764 m depth in Barail Shale, severe mud loss observed with loss rate ~18 bbl/hr.

Mitigation: Spotted LCM pill (CaCO_3 25 ppb) to cure lost circulation.

At 3772 m, experienced tight hole and stuck pipe condition with 18 tonnes overpull. Worked string worked

Drilling continued: torque spike observed across 3778 to 3790 m with erratic torque 17 to 26 kNm.

Mitigation applied: mud weight raised 1.06 to 1.09 sg, conducted wiper trip, connection standstill under 10
